

Session 5

How **similar** are texts and in what **regard**?

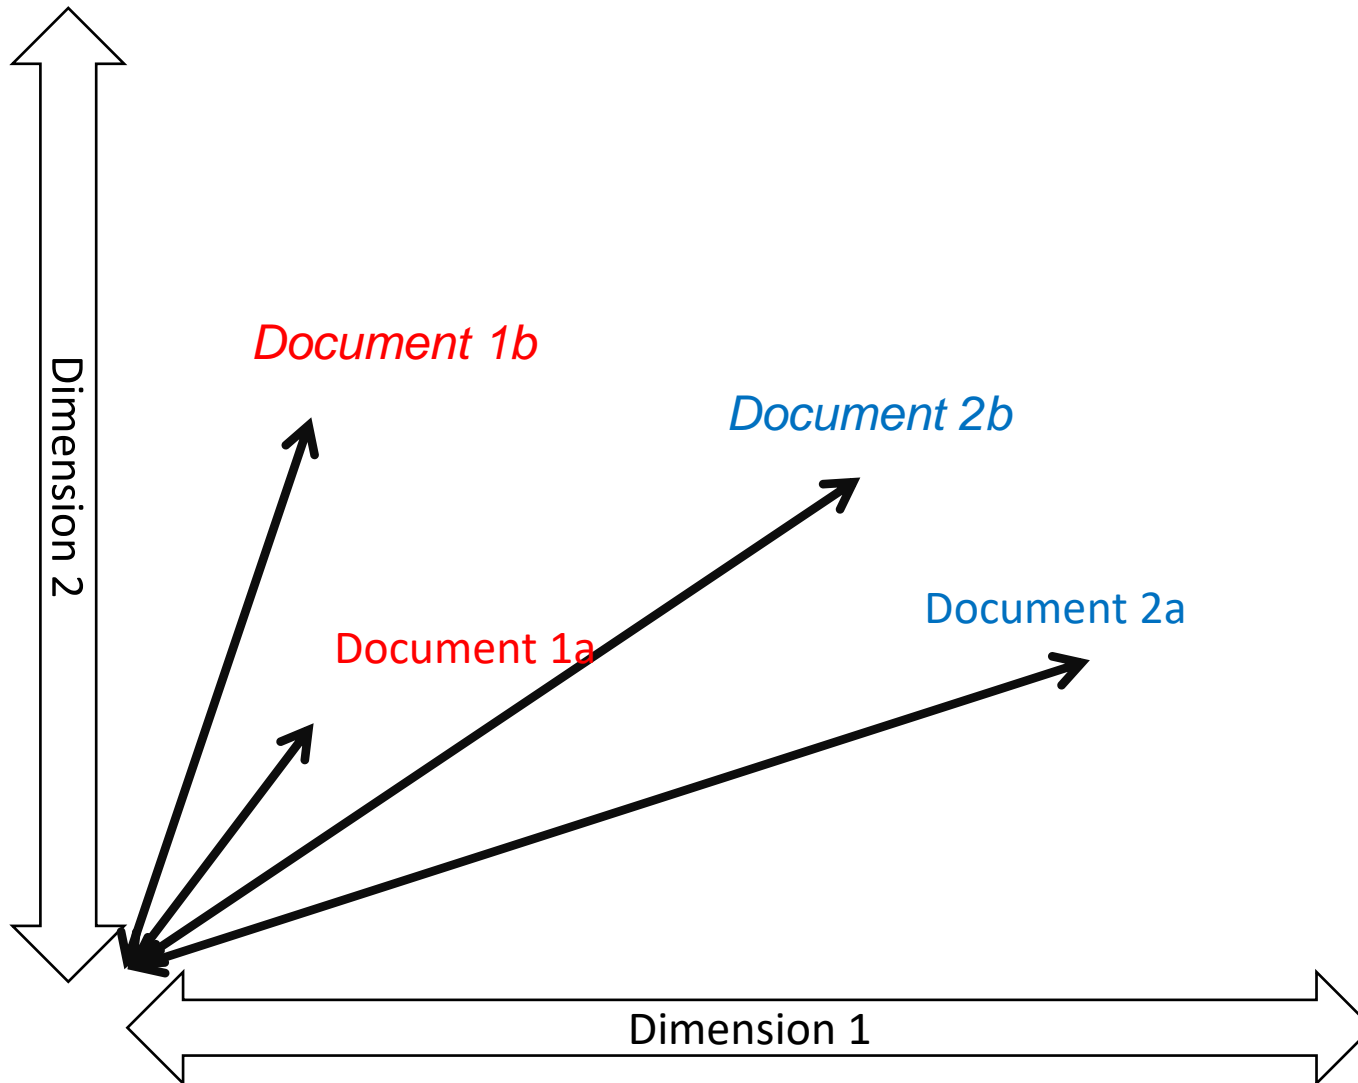

*Is it the **similarity** in my variables?*

Text Analysis as Similarity

Every word is
embedded in a
semantic space

Text Analysis as Document Similarity

Every document is
embedded in a
semantic space

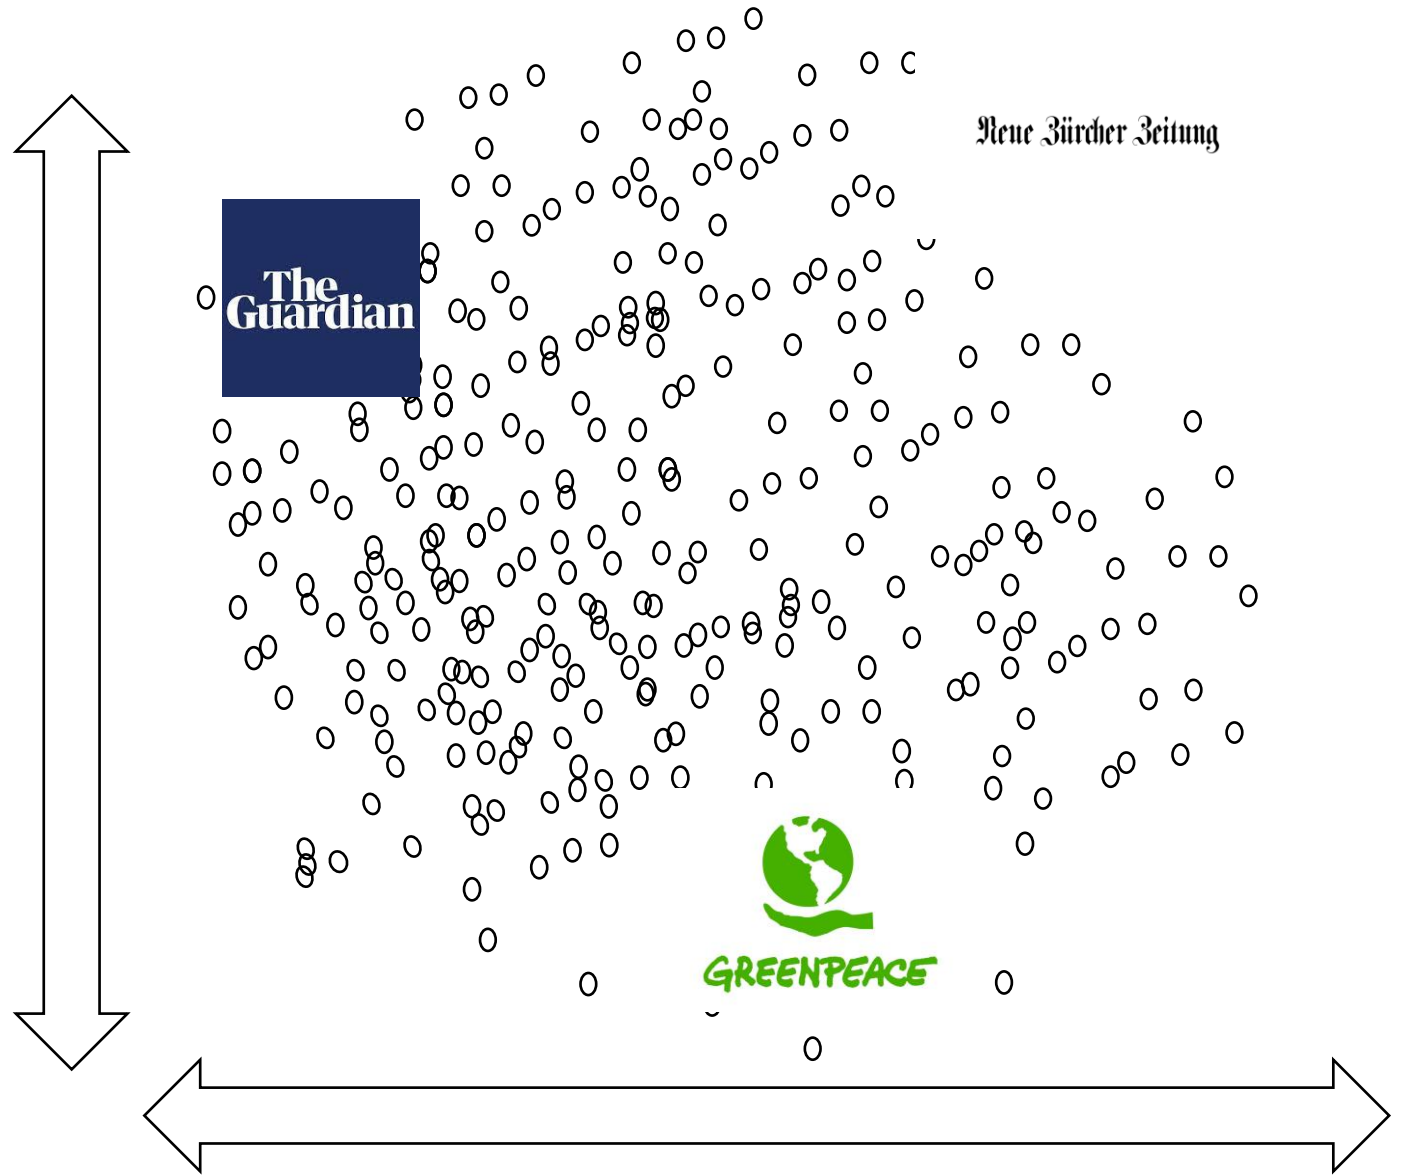

Aim of text analysis:
find the dimension
that corresponds to
your variable of
interest!

Aim of text analysis:
find the dimension
that corresponds to
your variable of
interest!

Aim of text analysis:
find the dimension
that corresponds to
your variable of
interest!

How to find the Dimension?

- Unsupervised: Hope for the best!
- Semisupervised: Give your model a hint
- Supervised: Tell it the endpoints
- Problems: Additional dimensions correlated with your variable

Every Problem can be a classification Problem

- Define Intension
- Define Extension (borders)

Validation

- 2 Reasons for Manual Coding
 - Training:
 - Validation
- Main differences:
 - Training requires a representation of every example
 - Validation requires a representation of examples necessary to succeed
- Validation is easier to code if random!

Taming Text

Institutions

Society

Speaker

Audience

Speaker

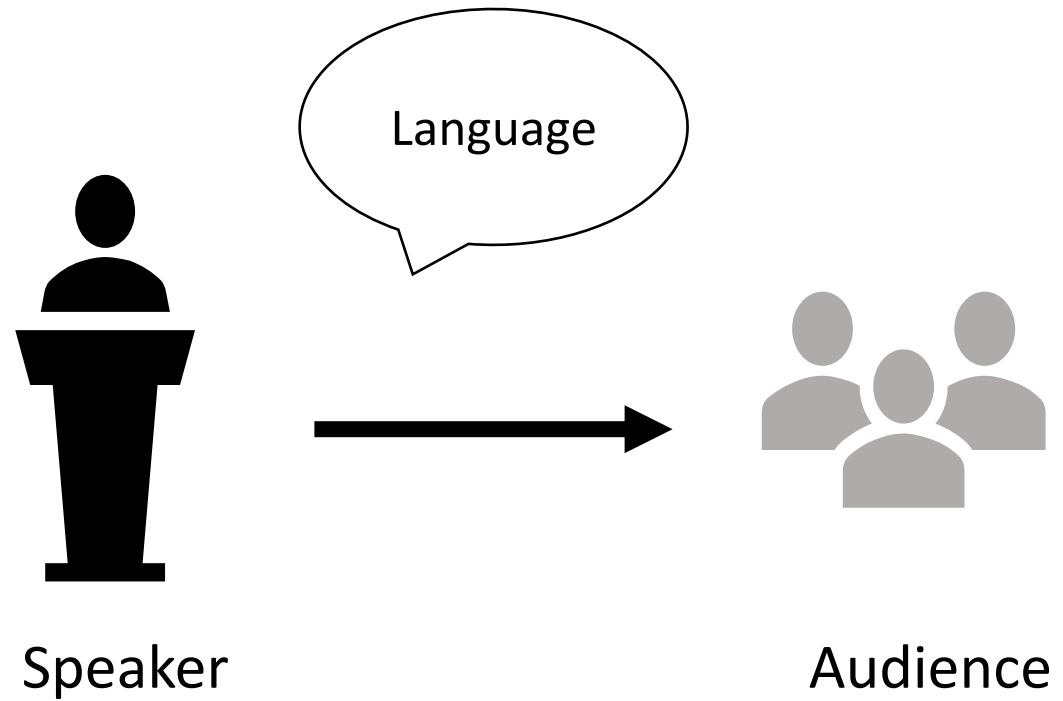

Speaker

Audience

Intent

- Inform
- Claim
- Critisize
- Define
- Defend
- Persuade

Language as Action

Form

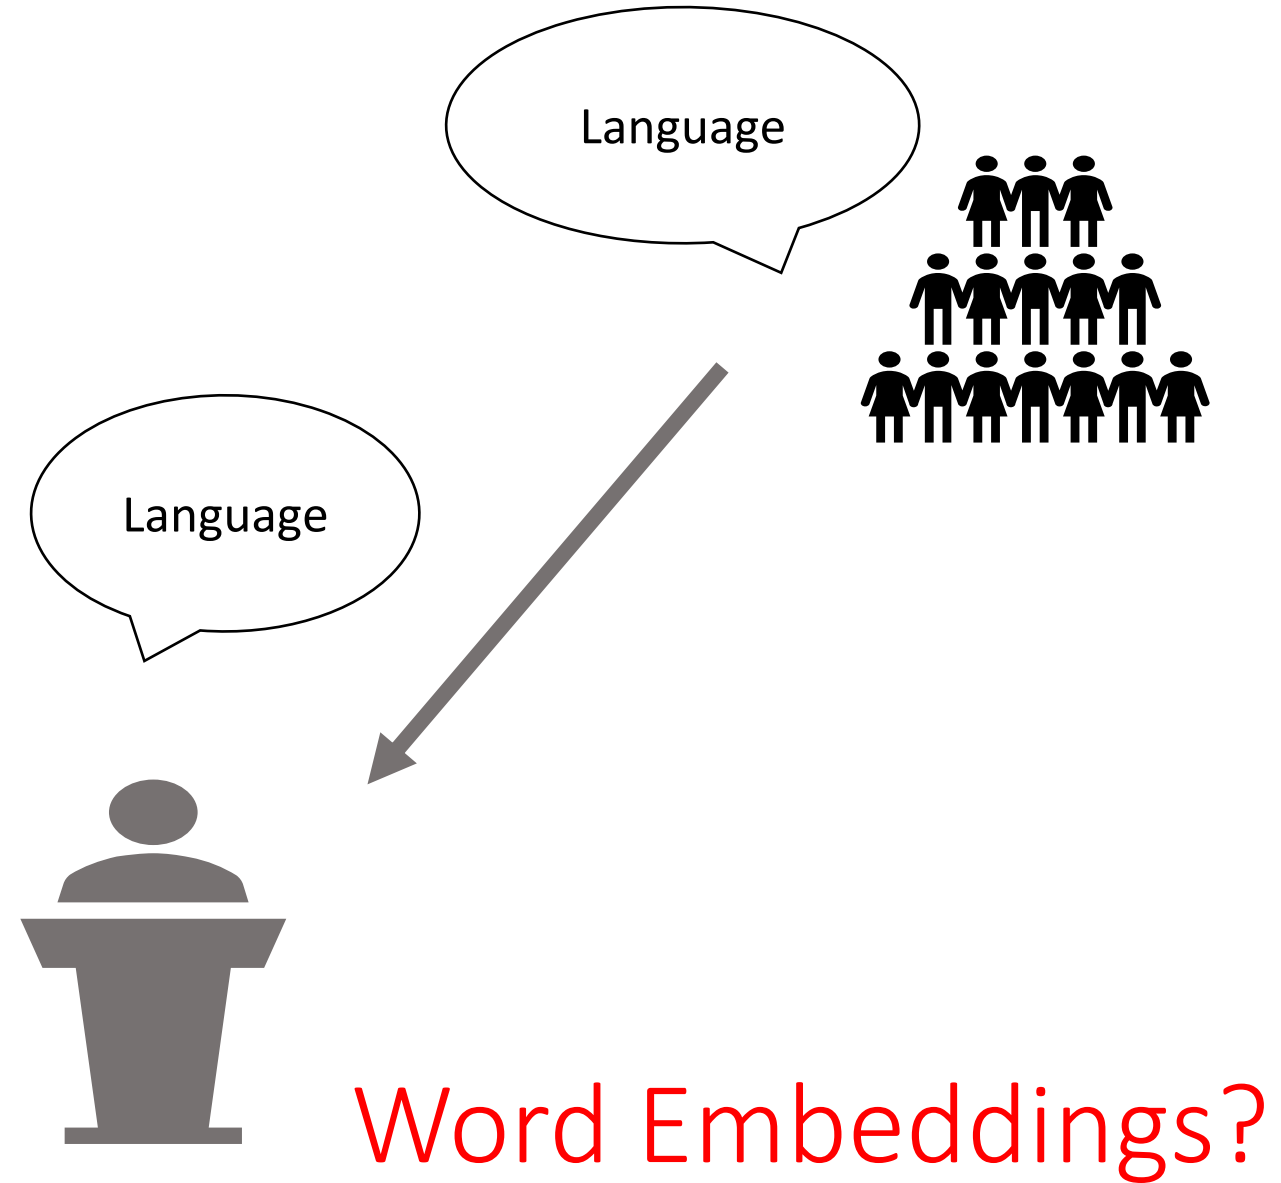

- Style
- Valence
 - Negativity
 - Stance
- Ambiguity
- Saliency
- Personlity

Language as Expression
of Characteristics

Language

- How is language used by society?
- How does it determine what can be said?

Audience

Audience

- Who is text addressed to?
- How will perception differ between audiences?
- Does audience shape message?

Local Embeddings!

Institutions

Institutions

- „Rules for Text“
 - Length
 - Structure
 - Social Norms
- Rules for Content
- Rules for Speakers

Meta Structures

- Level of Analysis
- Sentence
- Paragraph
- Document
- Meta Structure
 - Debate
 - Newspaper Issue
 - Category
- Corpus
